Compressor Guard Suction Screen Kit Clarification

Factory Air by Four Seasons is now offering a new product to help eliminate repeat compressor failures:
The Compressor Guard Suction Screen Kit
(FS-TM 69050 / EVR-MU 400025)

This kit offers the ability to place a screen in the suction side of the compressor manifold. We have found that when a compressor fails, there is a possibility that contaminants can back-flow into the suction hose. This product will help stop these contaminants from pumping back into the replacement compressor.

Sales Bulletin AB01-25 dated April 16, 2001 answered several questions about the use of the AC Compressor Guard. However, we did not address one recurring question: “Will this product meet the flushing/in-line filter requirement for warranty purposes?”

This product **DOES NOT FULFILL** any of the requirements needed to establish compressor warranty. This Suction Screen Kit is **NOT** to be considered an in-line filter.
